VinBiodiv

Transnational project to preserve and develop biodiversity in Upper Rhine vineyards

2021 – 2023

Bee-eater

Grape hyacinth

Measures to increase biodiversity

Construction of a dry-stone wall

Through a **transnational network**, VinBiodiv gathers naturalists, professionals from the wine-growing sector, research agencies and institutions to develop biodiversity.

Hoopoe feeds young

- Conducting the **individual studies** in vineyard estates of Upper-Rhine region
- **Implementing agro-ecological practices** and living spaces for biodiversity (hedges, bushes, nesting boxes)
- Developing a **guide for technical measures** and cultivation practices leading to an improvement of biodiversity

Experimentation and evaluation

Hollyhocks attract wild bees

- **Sharing Know-how** and feedback from experimentation
- **Performing experiments** on how biodiversity helps wine production
- **Publishing** first results

Wild tulip

Dissemination and promotion

A garden bumblebee on an viper's-bugloss

For professionnals ...

- **Broadcasting implemented actions** of the project (website, seminars, workshops)
- Conception of **trilingual training platform** on biodiversity in vineyards

... for a larger audience

- **Communication campaign** to raise public awareness
- **Organisation of a competition:** "Vittrophée", an award for model vineyards regarding biodiversity
- **Development and creation of media** on the subject of species and resource protection
