

Synthesis of SelfAgri Energie diagnosis Realised on Reskuh area

The diagnosis realised on the area of Reskuh, have revealed energy consumption figures that differ slightly from the French national standards.

Consumption standards

Electricity consumption

Farms with cheese-making workshops

Consumption figures by quintile

No effect on electricity consumption linked to the volume of milk produced or the milking method

Consumption in kWh depending on the presence of precooler, or heat recovery unit (1), of both devices (2), or none of them (0)

A decrease of electric consumption with energy savings devices

And a significant impact of cheese making workshop on electricity consumption

Synthesis of SelfAgri Energie diagnosis Realised on Reskuh area

Fuel consumption

Consumption
figures by
quintile

Farms with cheese-making
workshops

No trend in fuel consumption linked to dairy production on farms or to farm size
No visible impact from the cheese-making workshops

Solutions of energy savings and energy production

Factsheets on energy saving and renewable energy have been produced as part of the programme to support livestock farms in their energy planning; they are available on the project website.

Energy Savings

Energy Production
